

Tesla's Water Kit

Fitted to the outside of the water pipe at the water meter. This unit delivers a proprietary energy into tap water at the pipe, it has no moving parts, contains no magnets, uses no chemicals or electricity and does not filter the water. The Water Kits technology aids the water to return to its natural energised state. The return of life force is evident in the improved taste and obvious plant growth. The resultant soft energized water may appear crystal clear with a reduced chemical taste.
